

BEI PHASE 0 MASTER CONTEXT SYSTEM

Version: 1.0

Status: Mandatory Pre-Build Governance Layer

Purpose:

This document exists to ensure all future development of BEI remains aligned with the BEI Master Architecture, BEI Master Context and BEI MVP Build Manual.

This document is the primary AI training context used before every development session.

If any future build decision conflicts with this document, the Master Context Document or the Master Architecture, development must stop until alignment is restored.

SECTION 1

PHASE 0 OBJECTIVE

Phase 0 exists to create understanding before construction.

The objective is not to build software.

The objective is to ensure every AI system, developer, repository, workflow and future build session understands:

- What BEI is
- Why BEI exists
- What MVP 1 includes
- What MVP 1 excludes
- How intelligence flows through BEI
- What entities exist
- What relationships exist
- What success looks like

No development beyond landing page improvements may begin until Phase 0 is complete.

SECTION 2

BEI PURPOSE

BEI stands for:

Business Execution Intelligence.

BEI exists to identify, verify, prioritise and improve the highest-value constraint limiting business performance.

BEI is an intelligence system.

Software exists to support intelligence.

Every feature inside BEI must improve one or more of:

- Detection Accuracy
- Verification Accuracy
- Decision Accuracy
- Deployment Accuracy
- Learning Accuracy

If it does not improve one of these areas, it does not belong in MVP 1.

SECTION 3

BEI PRIMARY QUESTION

Everything inside BEI exists to answer one question:

"What is the highest-value verified root constraint limiting this business right now and what should happen next?"

If a feature does not contribute towards answering this question it should not be built.

SECTION 4

MVP 1 INDUSTRIES

Build Only:

- Estate Agencies
- Marketing Agencies
- Accountancy Firms

No additional industries may be introduced during MVP 1.

SECTION 5

MVP 1 CONSTRAINTS

Build Only:

- Trust Infrastructure Deficit
- Lead Response Deficit
- Pricing Constraint
- Staffing Inefficiency
- Management Bottleneck
- Capacity Constraint
- Founder Dependency
- Revenue Concentration Risk
- Offer Weakness
- Market Selection Risk

No additional constraints until MVP validation is complete.

SECTION 6

BEI GOLDEN RULES

Rule 1

Detection Is Not Proof

Rule 2

Verification Before Recommendation

Rule 3

Root Causes Over Symptoms

Rule 4

One Primary Constraint

Rule 5

Opportunity Before Deployment

Rule 6

Approval Before Execution

Rule 7

Learning From Outcomes

Rule 8

Accuracy Over Volume

Rule 9

Business Impact Over Activity

Rule 10

Every Decision Must Be Explainable

Rule 11

Every Constraint Must Be Verifiable

Rule 12

Every Deployment Must Be Measurable

SECTION 7

INTELLIGENCE FLOW

Connector Layer

↓

Data Normalisation Layer

↓

Business Twin

↓

Business Health Engine

↓

Constraint Detection Engine

↓

Constraint Verification Engine

↓

Constraint Challenge Framework

↓

Constraint Relationship Mapping

↓

Constraint Network Intelligence

↓

Decision Intelligence Engine

↓

Opportunity Engine

↓

Deployment Engine

↓

Outcome Measurement Engine

↓

Learning Engine

SECTION 8

CORE ENTITY DICTIONARY

Business

Represents a company being analysed.

User

Represents an authenticated platform user.

Connector

External system connection.

Metric

Normalised business measurement.

Benchmark

Industry comparison reference.

Business Twin

Digital representation of the business.

Constraint

Detected business limitation.

Constraint Evidence

Evidence supporting a constraint.

Constraint Relationship

Relationship between constraints.

Constraint Network

Network representation of business bottlenecks.

Opportunity

Value available from improvement.

Deployment

Approved action package.

Outcome

Measured result of deployment.

Learning Record

Stored intelligence outcome.

Benchmark Record

Stored benchmark reference.

Feedback Record

User and system feedback.

SECTION 9

PRIMARY ENTITY RELATIONSHIPS

Business

↓

Business Twin

↓

Business Health

↓

Constraints

↓

Constraint Verification

↓

Constraint Network

↓

Decision Intelligence

↓

Opportunity

↓

Deployment

↓

Outcome

↓

Learning Record

SECTION 10

MVP 1 DEPLOYMENT SCOPE

Allowed:

CRM

Lead Routing

Lead Assignment

Tasks

Notifications

Review Systems

Trust Systems

SEO Content

Content Publishing

Internal Linking

Reporting

Monitoring

Not Allowed:

Pricing Changes

Staffing Decisions

Management Decisions

Strategic Decisions

M&A Activity

Market Expansion Decisions

These remain recommendation-only.

SECTION 11

PHASE DISCIPLINE

Development must follow:

Phase 0

Governance

Phase 1

Core Data Architecture

Phase 2

Connector Layer

Phase 3

Business Twin

Phase 4

Business Health

Phase 5

Constraint Detection

Phase 6

Constraint Verification

Phase 7

Constraint Network

Phase 8

Decision Intelligence

Phase 9

Opportunity Engine

Phase 10

Deployment Engine

Phase 11

Outcome Measurement

Phase 12

Learning Engine

Phase 13

Benchmark Evolution

Phase 14

Feedback Intelligence

Phase 15

User Experience

Phase 16

AI Agents

Phase 17

System Validation

No phase may be skipped.

SECTION 12

BUILD SESSION PROTOCOL

Every development session must begin with:

Current Phase:

Objective:

Allowed Scope:

Excluded Scope:

Success Criteria:

Validation Required:

Approval Required:

No work may begin until these items are defined.

SECTION 13

REPOSITORY GOVERNANCE

All BEI repositories must contain:

/architecture

/context

/manuals

/prompts

/database

/services

/connectors

/deployments

/agents

/tests

/docs

The repository structure must reflect architecture structure.

SECTION 14

SUCCESS DEFINITION

BEI succeeds when it can:

Build an accurate Business Twin

Detect meaningful constraints

Verify constraints correctly

Identify the Primary Constraint

Quantify opportunity accurately

Deploy approved improvements safely

Measure outcomes accurately

Learn from outcomes

Improve future intelligence

The objective is not software.

The objective is intelligence.
