

BEI MVP 1 BUILD OPERATOR MANUAL

Version 3.0

Status: Active Build Manual

Purpose:

This document is the operational construction blueprint for building BEI MVP 1 inside Base44.

This is not an architecture document.

This is a build execution document.

The objective is to build BEI in the correct sequence so that every layer is validated before the next layer is introduced.

The guiding principle is:

Build Foundation First.

Intelligence Second.

Automation Third.

Learning Fourth.

Never build future layers before validating current layers.

BEI MVP 1 OBJECTIVE

BEI MVP 1 exists to prove:

A business can connect its systems.

↓

BEI can build a Business Twin.

↓

BEI can identify constraints.

↓

BEI can verify constraints.

↓

BEI can identify the Primary Constraint.

↓

BEI can quantify opportunity.

↓

BEI can deploy approved improvements.

↓

BEI can measure outcomes.

↓

BEI can improve future intelligence.

Success is not measured by features.

Success is measured by decision accuracy.

MVP 1 INDUSTRIES

Build only:

Estate Agencies

Marketing Agencies

Accountancy Firms

No additional industries until intelligence validation is complete.

MVP 1 CONSTRAINTS

Build only the top priority constraints:

Trust Infrastructure Deficit

Lead Response Deficit

Pricing Constraint

Staffing Inefficiency

Management Bottleneck

Capacity Constraint

Founder Dependency

Revenue Concentration Risk

Offer Weakness

Market Selection Risk

No additional constraints until validation is complete.

BUILD PHILOSOPHY

Every phase follows:

Build

↓

Test

↓

Audit

↓

Validate

↓

Approve

↓

Proceed

Never move forward with unvalidated architecture.

PHASE 0

REFER TO SUPPORTED DOCUMENT

BEFORE BUILD - BEI BASE44 FOLDER

Complete this until base44 understands the ent

PHASE 1

CORE DATA ARCHITECTURE

Objective:

Build all core entities.

Create:

Businesses

Users

Connectors

Metrics

Benchmarks

Business Twins

Constraints

Constraint Evidence

Constraint Relationships

Constraint Networks

Opportunities

Deployments

Outcomes

Learning Records

Benchmark Records

Feedback Records

Test:

CRUD functionality.

Relationships.

Permissions.

Data integrity.

Deliverable:

Core database operational.

PHASE 2

CONNECTOR LAYER

Objective:

Build ingestion framework.

Connect:

Google Analytics

Google Search Console

Google Business Profile

Meta Ads

TikTok Ads

CRM

Website

Review Platforms

Email Platforms

Test:

Connection reliability.

Refresh schedules.

Data mapping.

Error handling.

Deliverable:

Live business data entering BEI.

PHASE 3

BUSINESS TWIN ENGINE

Objective:

Create Business Twin generation.

Build:

Business Profile

Business Model

Revenue Structure

Team Structure

Marketing Structure

Sales Structure

Operations Structure

Risk Structure

Dependency Structure

Test:

Business Twin completeness.

Accuracy.

Data mapping.

Deliverable:

Dynamic Business Twin.

PHASE 4

BUSINESS HEALTH ENGINE

Objective:

Generate health scoring.

Build:

Growth Score

Operations Score

Strategy Score

Risk Score

Context Score

Overall Health Score

Test:

Score consistency.

Industry weighting.

Benchmark alignment.

Deliverable:

Business Health Dashboard.

PHASE 5

CONSTRAINT DETECTION ENGINE

Objective:

Detect constraints.

Build:

Constraint Rules

Detection Rules

Evidence Collection

Evidence Weighting

Detection Confidence

Test:

Known business scenarios.

Detection consistency.

False positives.

Deliverable:

Constraint identification.

PHASE 6

CONSTRAINT VERIFICATION ENGINE

Objective:

Verify constraints.

Build:

Alternative Cause Detection

Root Cause Analysis

Evidence Validation

Verification Confidence

Constraint Challenge Framework

Test:

False positive reduction.

Root cause accuracy.

Deliverable:

Verified constraints.

PHASE 7

CONSTRAINT NETWORK ENGINE

Objective:

Build business-wide intelligence.

Build:

Constraint Relationship Mapping

Constraint Dependencies

Network Impact Scores

Constraint Dominance Scores

Constraint Cascades

Primary Constraint Logic

Test:

Relationship accuracy.

Dominance ranking.

Network consistency.

Deliverable:

Constraint Network Intelligence.

PHASE 8

DECISION INTELLIGENCE ENGINE

Objective:

Identify what matters most.

Build:

Priority Engine

Decision Framework

Impact Ranking

Constraint Prioritisation

Recommendation Logic

Confidence Scoring

Test:

Decision consistency.

Primary constraint accuracy.

Deliverable:

Decision Intelligence Layer.

PHASE 9

OPPORTUNITY ENGINE

Objective:

Convert constraints into value.

Build:

Revenue Impact Models

Profit Impact Models

Capacity Impact Models

Risk Reduction Models

Enterprise Value Models

Opportunity Confidence

Test:

Opportunity accuracy.

Consistency.

Deliverable:

Quantified opportunities.

PHASE 10

DEPLOYMENT ENGINE

Objective:

Create execution capability.

Build:

Deployment Packages

Approval Framework

Execution Framework

Rollback Framework

Monitoring Framework

MVP Deployment Categories:

CRM

Lead Routing

Tasks

Notifications

Reviews

Trust Systems

SEO

Content Generation

Content Publishing

Internal Linking

Reporting

Monitoring

Test:

Safe deployment.

Execution logging.

Rollback.

Deliverable:

Deployment Engine operational.

PHASE 11

OUTCOME MEASUREMENT ENGINE

Objective:

Measure actual business improvement.

Build:

Outcome Records

Expected Outcome Tracking

Actual Outcome Tracking

Variance Analysis

Success Scoring

Deployment Accuracy Tracking

Test:

Outcome consistency.

Measurement reliability.

Deliverable:

Outcome Intelligence Layer.

PHASE 12

LEARNING ENGINE

Objective:

Store intelligence.

Build:

Constraint Learning

Opportunity Learning

Deployment Learning

Outcome Learning

Industry Learning

Test:

Learning record creation.

Learning retrieval.

Deliverable:

Learning Engine operational.

PHASE 13

BENCHMARK EVOLUTION ENGINE

Objective:

Create proprietary benchmarks.

Build:

Industry Benchmarks

Revenue Benchmarks

Size Benchmarks

Constraint Benchmarks

Deployment Benchmarks

Benchmark Confidence

Benchmark Evolution Logic

Test:

Benchmark updates.

Evolution accuracy.

Deliverable:

Dynamic benchmark system.

PHASE 14

INTELLIGENCE FEEDBACK ENGINE

Objective:

Improve future decisions.

Build:

Detection Feedback

Verification Feedback

Decision Feedback

Opportunity Feedback

Deployment Feedback

Outcome Feedback

Model Update Logic

Test:

Feedback loop integrity.

Decision improvement.

Deliverable:

Self-improving intelligence loop.

PHASE 15

USER EXPERIENCE LAYER

Objective:

Build product experience.

Create:

Onboarding

Business Health Check

Business Twin View

Constraint Dashboard

Constraint Network View

Opportunity Dashboard

Deployment Centre

Outcome Centre

Learning Centre

Executive Reporting

Test:

User journeys.

Navigation.

Clarity.

Deliverable:

Complete application experience.

PHASE 16

AI AGENTS

Objective:

Create intelligence interfaces.

Build:

Business Twin Agent

Constraint Agent

Verification Agent

Decision Agent

Opportunity Agent

Deployment Agent

Learning Agent

Test:

Agent consistency.

Reasoning quality.

Deliverable:

Operational AI layer.

PHASE 17

SYSTEM VALIDATION

Objective:

Validate complete BEI architecture.

Run:

Business 1

Business 5

Business 10

Business 20

Business 50

Measure:

Constraint Accuracy

Verification Accuracy

Decision Accuracy

Opportunity Accuracy

Deployment Accuracy

Outcome Accuracy

Benchmark Accuracy

Deliverable:

Validated MVP.

MVP 1 SUCCESS CRITERIA

MVP 1 succeeds when:

Businesses connect data.

↓

Business Twins are generated.

↓

Primary Constraints are identified.

↓

Constraints are verified correctly.

↓

Opportunities are quantified accurately.

↓

Approved deployments execute safely.

↓

Outcomes are measured.

↓

Learning improves future decisions.

↓

Every business improves BEI.

The objective is not software.

The objective is intelligence.

End of Manual.
